

1. (Amended) A preset information setting system comprising:  
an optical device; and  
an information write device set outside said optical device and  
connected to said optical device,

wherein said optical device includes an optical member, drive means  
for driving said optical member, storage means for storing preset information which is  
written by said information write device and relates to driving of said optical member, and  
control means for controlling said drive means, and

wherein said control means performs preset drive control of said  
drive means on the basis of the preset information stored in said storage means.

2. (Amended) A preset information setting system according to claim  
1, wherein said information write device generates preset information of an arbitrary form,  
and

said optical device further comprises information conversion means for  
converting the preset information of the arbitrary form from said information write device  
into preset information of a form processible by said control means, said information  
conversion means storing the converted preset information of the processible form in said  
storage means.

3. (Amended) A preset information setting system according to claim  
1, wherein said information write device generates, as preset information of an arbitrary

form, relative position information representing a driving amount from a predetermined position in a movable range of said optical member, and

said optical device further comprises information conversion means for converting the relative position information from said information write device into preset information representing an actual driving position of said optical member, said information conversion means storing the converted preset information representing the actual driving position in said storage means.

4. (Amended) A preset information setting system according to claim 1, wherein said information write device generates focal length information as preset information of an arbitrary form, and

said optical device further comprises information conversion means for converting the focal length information from said information write device into preset information representing an actual driving position of said optical member, said information conversion means storing the converted preset information representing the actual driving position in said storage means.

5. (Amended) A preset information setting system according to claim 1, wherein said information write device generates, as preset information of an arbitrary form, driving time information representing a driving time taken from one end to the other end in a movable range of said optical member, and

said optical device further comprises information conversion means for converting the driving time information from said information write device into preset information representing an actual driving speed of said optical member, said information conversion means storing the converted preset information representing the actual driving speed in said storage means.

6. (Amended) A preset information setting system according to claim 1, wherein said information write device generates, as preset information of an arbitrary form, range driving time information representing a driving time in a driving range of the preset driving control, and

said optical device further comprises information conversion means for converting the range driving time information from said information write device into preset information representing a driving speed of said optical member, said information conversion means storing the converted preset information representing the driving speed in said storage means.

7. (Amended) A preset information setting system according to claim 1, wherein said information write device generates preset information of a form processible in the preset drive control, and stores the generated preset information in said storage means.

8. (Amended) A preset information setting system according to claim 1, wherein said optical member includes a zoom lens optical system.

9. (Amended) A preset information setting system according to claim 1, wherein said information write device includes a computer.

10. (Amended) A preset information setting system comprising:  
an optical device; and  
an information write device set outside said optical device and  
connected to said optical device,  
wherein said optical device includes an optical member, drive means  
for driving said optical member, storage means for storing first preset information which is  
written by said information write device and relates to driving of said optical member,  
storage operation setting means operated to store second preset information into said  
storage means, and control means for controlling said drive means, and  
wherein said control means selects one of the first preset information  
and the second preset information stored in said storage means, and performs preset drive  
control of said drive means on the basis of the selected first preset information or second  
preset information.

--16. (New) A preset information setting system comprising:  
an optical device; and  
an information write device set outside said optical device and  
connected to said optical device,  
wherein said optical device includes an optical member, drive means  
for driving said optical member, and control means for controlling said drive means, and  
wherein said control means performs preset drive control of said  
drive means on the basis of preset information which is written by said information write  
device.

17. (New) A preset information setting system according to Claim 16,  
further comprising:  
a memory that stores preset information which is written by said  
information write device.

18. (New) A preset information setting system according to claim 17,  
wherein said information write device generates preset information of an arbitrary form,  
and  
said optical device further comprises information conversion means for  
converting the preset information of the arbitrary form from said information write device  
into preset information of a form processible by said control means, said information

conversion means storing the converted preset information of the processible form in said memory.

19. (New) A preset information setting system according to claim 17, wherein said information write device generates, as preset information of an arbitrary form, relative position information representing a driving amount from a predetermined position in a movable range of said optical member, and

said optical device further comprises information conversion means for converting the relative position information from said information write device into preset information representing an actual driving position of said optical member, said information conversion means storing the converted preset information representing the actual driving position in said memory.

20. (New) A preset information setting system according to claim 17, wherein said information write device generates focal length information as preset information of an arbitrary form, and

said optical device further comprises information conversion means for converting the focal length information from said information write device into preset information representing an actual driving position of said optical member, said information conversion means storing the converted preset information representing the actual driving position in said memory.

21. (New) A preset information setting system according to claim 17, wherein said information write device generates, as preset information of an arbitrary form, driving time information representing a driving time taken from one end to the other end in a movable range of said optical member, and

said optical device further comprises information conversion means for converting the driving time information from said information write device into preset information representing an actual driving speed of said optical member, said information conversion means storing the converted preset information representing the actual driving speed in said memory.

22. (New) A preset information setting system according to claim 17, wherein said information write device generates, as preset information of an arbitrary form, range driving time information representing a driving time in a driving range of the preset driving control, and

said optical device further comprises information conversion means for converting the range driving time information from said information write device into preset information representing a driving speed of said optical member, said information conversion means storing the converted preset information representing the driving speed in said memory.

23. (New) A preset information setting system according to claim 17, wherein said information write device generates preset information of a form processible in the preset drive control, and stores the generated preset information in said memory.

24. (New) A preset information setting system according to claim 17, wherein said optical member includes a zoom lens optical system.

25. (New) A preset information setting system according to claim 17, wherein said information write device includes a computer.

26. (New) A preset information setting system according to Claim 16, wherein said preset information setting system comprises a camera on which the optical device is mounted.

27. (New) A preset information setting system comprising:  
an optical device; and  
an information write device, set outside said optical device and connected to said optical device, for setting first preset information,  
wherein said optical device includes an optical member, drive means for driving said optical member, operation setting means for setting second preset information, and control means for controlling said drive means, and

wherein said control means selects one of the first preset information which is written by said information write device and the second preset information set by said operation setting means, and performs preset drive control of said drive means on the basis of the selected first preset information or second preset information.

28. (New) A preset information setting system according to Claim 27, wherein said preset information setting system comprises a camera on which an optical device is mounted.

29. (New) An optical device comprising:  
an optical member;  
drive means for driving said optical member; and  
control means for controlling said drive means, wherein said control means performs preset drive control of said drive means on the basis of preset information which is written by an information write device set outside said optical device.

30. (New) An optical device comprising:  
an optical member;  
drive means for driving said optical member;  
operation setting means for setting preset information; and  
control means for controlling said drive means,
